How Tax Complexity and Enforcement Affect the Equity and Efficiency of
The Income Tax

Louis P. Kaplow

NBER Working Paper No. 12562
Issued in 2010
NBER

Much criticism of the income tax involves proposals for large compliance costs, proposals for incremental reforms as well as proposals for such changes is difficult because the underlying efficiency concerns that animate more of a framework for a unified analysis, in base and the rate structure are enforcement difficulties.

TOP TEN TAX EVADERS

Comparing a World Bank report to a Heritage Foundation report, British accountant Richard Murphy estimates global tax evasion at five percent of the global economy and found these ten countries had the largest absolute levels of evasion

Trends

- Tendency for overruling and demotivate the citizens
- The loose of trust of governments in their citizens
- Evaluation of priorities, enumeration of fundamental rights, like the need for “digital fundamental rights”?
- Loose of data governance for individuals and the included permanent penetration of personal spheres
- Growing extremism in population in all directions

Questions

- How could a interconnected and overdriven scenario like this ruled in a balanced way?
- Which are the current and potential impacts of these supervision of individuals?
- Are we moving into “digital dictatorship”?
- Which are the impacts to democracy?

Facing and try moving the challenges

Thank you for your
attention
